Professional Summary

Digital Transformation Consultant, Business Development Manager, and PhD Researcher in Software Engineering with extensive experience in business analysis, enterprise systems architecture, and AI-driven marketing automation. Proven ability to evaluate organizations holistically by analyzing business processes, operational workflows, market positioning, and digital maturity—not only to design scalable solutions, but to identify and cultivate new business opportunities that drive enterprise growth and innovation partnerships.

Specialized in conducting on-site enterprise assessments, defining As-Is and To-Be enterprise architectures, and delivering structured digital transformation roadmaps. In parallel, leverages these insights to drive business development by translating client capabilities and market needs into strategic offerings, shaping proposals, and building long-term partnerships that align with both client objectives and organizational revenue goals. Expertise spans ERP systems, enterprise software, data analysis, and system adoption strategies, supported by a deep understanding of market dynamics and customer behavior.

Current doctoral research focuses on Explainable Artificial Intelligence (XAI), aiming to design highly interpretable AI models through an innovative sector-based methodology (Sector-X), bridging the gap between academic research and real-world enterprise adoption. This research directly informs business development efforts by identifying emerging AI applications and translating complex technical capabilities into commercially viable, adoption-ready solutions. Brings a multidisciplinary background in software engineering, UX/UI design, marketing strategy, and project management, enabling effective translation of complex business and research requirements into high-impact technical, strategic, and commercial outcomes.

Career Objective

To leverage my combined expertise in digital transformation consulting, enterprise software architecture, and explainable artificial intelligence research to drive business development and strategic growth. I aim to identify and cultivate new market opportunities, forge innovation partnerships, and translate complex technical capabilities into scalable, commercially viable solutions that optimize operations and improve decision-making for enterprises.

I seek to contribute to organizations that value the alignment of technology, business strategy, regulatory compliance, and market realities. In parallel, I am committed to advancing applied research in trustworthy and transparent AI systems suitable for enterprise and regulated environments—using this research as a foundation to develop business opportunities and deliver well-governed, interpretable digital solutions that achieve sustainable growth.

Professional Teaching & Training

Software Architecture & Enterprise Systems – Professional Lecturer

- Prepared and delivered structured professional training programs in Software Architecture.

- Covered core architectural concepts, roles, and responsibilities within modern software systems.
- Explained major architectural styles and integration models, including Monolithic, Layered, Microservices, Event-Driven Architecture, and SOA.
- Delivered in-depth instruction on evaluating and designing for Quality Attributes, such as performance, security, reliability, scalability, and maintainability.
- Guided architecture-level decision making through trade-off analysis, technical constraints, and business considerations.
- Introduced architecture documentation standards and models for effective stakeholder communication.
- Integrated real-world enterprise case studies and digital transformation scenarios to bridge theoretical foundations with practical implementation.

Software Engineering & Project Management – Instructional Capability

- Capable of delivering professional instruction in core Software Engineering principles and practices.
- Teaching experience and instructional capability in Software Development Life Cycle (SDLC) models.
- Explains and contextualizes Agile methodologies, including Scrum and Kanban, within enterprise and delivery environments.
- Provides structured instruction in project management fundamentals, governance models, and execution control.
- Delivers analytical instruction on quality attributes, architectural quality evaluation, and system-level trade-offs.
- Integrates User Experience (UX) principles into software and architectural design discussions.
- Instructional approach emphasizes structured reasoning, decision rationale, and alignment between technical design, business objectives, and organizational constraints.

Professional Experience

Niyat – Saudi Arabia

Jan 2019 – Present

Business Development Manager & Digital Transformation Consultant

- Conduct on-site assessments for enterprises and business entities to evaluate business operations, workflows, and digital maturity—identifying upsell opportunities and potential areas for new service offerings.
- Perform in-depth business analysis with a strong focus on software systems and enterprise platforms to uncover market gaps and client needs that can be addressed through new or enhanced solutions.
- Gather and consolidate requirements through structured stakeholder interviews and data collection, translating client pain points into commercially viable value propositions.
- Analyze the current-state (As-Is) business and IT landscape, including processes, systems, and integration gaps, to identify opportunities for business development and strategic partnerships.
- Design Baseline Enterprise Architecture representing existing operational and technical environments as a foundation for proposing new business streams and solution enhancements.
- Propose Target Enterprise Architecture aligned with business strategy, scalability, regulatory compliance, and client capabilities—positioning these proposals as new business opportunities for the organization.
- Recommend suitable enterprise systems and digital solutions, including ERP, CRM, sector-specific platforms, and analytics solutions, while managing vendor relationships and partnership pipelines.
- Define enhancement strategies for existing systems to improve efficiency, governance, and user adoption—identifying expansion opportunities within current client accounts.
- Develop detailed digital transformation roadmaps, including phased implementation plans, milestones, timelines, and dependencies,

and use these roadmaps to drive client negotiations and contract closures.

- Ensure alignment with local regulations, legal frameworks, data protection requirements, and quality standards as part of developing compliant and market-ready solutions.
- Evaluate organizational readiness, operational capacity, and expected ROI from digital system adoption to build business cases that support investment decisions and client commitments.
- Support system positioning and go-to-market strategies, particularly for enterprise software solutions, by developing sales enablement materials and participating in client presentations and negotiations.
- Provide strategic consulting in long-term planning, operational optimization, and management advisory, while proactively identifying and cultivating new business leads and partnership opportunities.
- Act as a regional representative and market enabler for technology vendors, supporting market entry, product evaluation, and expansion—building and maintaining a robust network of partners and clients.
- Leverage prior UX/UI design expertise to prioritize system features, improve user experience, and maximize adoption—using these insights to differentiate offerings and strengthen client proposals.
- Apply strong project management capabilities to guide and oversee digital transformation initiatives end-to-end, ensuring successful delivery that generates repeat business and client referrals.
- Build and maintain a qualified sales pipeline through proactive market research, networking, and lead generation activities targeting enterprise clients.
- Develop and deliver compelling proposals, presentations, and pitch decks that communicate value propositions and differentiate the organization's capabilities in competitive bidding processes.
- Negotiate contracts and commercial terms with clients and partners, balancing client satisfaction with organizational revenue goals and profitability targets.

- Monitor market trends, competitor activities, and emerging technologies to identify new business opportunities and inform strategic direction for solution development.
- Cultivate long-term relationships with key client stakeholders, serving as a trusted advisor and primary point of contact for ongoing business development and account growth.

Techni IT Solutions – Riyadh, Saudi Arabia

Mar 2014 – Dec 2018

AI-Driven Marketing Automation & Consultant

- Led end-to-end marketing and customer enablement strategies for ERP and SaaS products.
- Developed AI-powered predictive models to optimize marketing timing, logistics efficiency, and customer satisfaction.
- Designed intelligent onboarding and training campaigns to increase ERP system adoption.
- Oversaw multi-channel marketing campaigns and performance measurement, delivering data-driven recommendations to management.
- Coordinated between clients, technical teams, and marketing units to ensure consistent brand messaging and positioning.
- Key Achievements:
 - Increased customer satisfaction by 70% through targeted post-sales marketing initiatives.
 - Improved operational efficiency and campaign ROI using AI-driven analytics.
 - Enabled advanced customer segmentation for strategic targeting, enhancing engagement and service quality.

Design Asset – Riyadh, Saudi Arabia

Jan 2005 – Dec 2013

UX/UI Designer & Visual Marketing Specialist

- Developed visual assets and marketing content for ERP dashboards and B2B platforms.
- Managed social media campaigns to increase brand awareness and user engagement.

- Applied SEO best practices to improve online visibility and conversion rates.
- Key Achievements:
 - Doubled social media followers and increased engagement by 300%.
 - Increased organic traffic by 70% through SEO optimization.
 - Implemented an intelligent post-sales follow-up system, achieving 15% sales growth and 50% improvement in customer satisfaction.

Compass Egypt – Cairo, Egypt

Mar 2002 – Nov 2005

Unit Manager – Hospitality Services

- Managed large-scale operations across aviation, healthcare, and oil & gas sectors.
- Led operations, logistics, and customer service for sensitive and remote sites.
- Coordinated cross-functional teams and ensured compliance with safety regulations and ISO standards.

Education

PhD Researcher in Software Engineering	2025 – Present
Faculty of Graduate Studies for Statistical Research, Cairo University	
Research focus: Explainable AI (XAI) – Sector-X Methodology.	
M.Sc. in Software Engineering	2025
Faculty of Graduate Studies for Statistical Research, Cairo University	
Postgraduate Diploma in Software Engineering	2022
Faculty of Graduate Studies for Statistical Research, Cairo University	
B.Sc. in Hotel Management	2002
Faculty of Tourism & Hotels, Helwan University, Egypt
